

SCALLOPED or WAVED BORDER

A scalloped or waved order may have rounded corners or corners with “ears”.

Choose your scallop tool and follow the directions on how to decide how many scallops or waves you want.

Decide what type of corners you want.

Use the tool to mark your scallops or waves. You may start from the corners and work in or start in the middle and work out.

At times you may need to “fudge” a bit but you will not notice this if someone holds up your quilt and you go by on a galloping horse.

With either the scalloped or waved order, a single fold bias bind works very well.
